Enroll your child in a summer of endless science fun. Located high atop Talcott Mountain, this day program is especially designed for intellectually excited girls and boys.

Children in grades K-8 can attend for the summer or just by the week. The season runs from the last full week of June to the second week of August.

Imagine a place...

- ...where your child will experience the world of science and technology with other curious and creative girls and boys.
- ...that challenges young minds with creative problems.
- ...that makes learning fun and exciting.

Talcott Mountain is also a place for the musical, the artistic, the scientific and the inquisitive. A place to make new friends, equipped with instruments of discovery. A place where everyone cares about children and where your child will thrive! Your child will explore and create in a hands-on program developed by educators and scientists at TMSC.

Age-appropriate sessions include: Robotics, Computer Game Making, Astronomy, Rocketry, Connecticut Wildlife, Magic & Science, Arduino, Science Sleuths, Girls Rock!, Raspberry Pi, Green Energy, Arts and Crafts, Computer Graphics and Animation, Wild Weather, 3D Design & Printing, Pirate Science, Electronics, Geocaching and Movie Making.
